

*If it's VALUE you want - it's PLYMOUTH you want*

## LED Complete Taillamps

**Part Number:** 6046

**Application:** 1946-48 Plymouth

**Product Details:** Complete taillamp assembly with very bright and visible LEDs for the stop, tail, and turn signal functions. LEDs feature a wide viewing angle of 100 degrees as well as cool operation and long life. This lamp is designed to bolt into a 1946-48 Plymouth in place of the original taillight. May be used with three or four wire connection (ground, taillight, stoplight, turnsignal). Includes RapidFire™ brake lights and modulated taillights for maximum vehicle visibility.

**Construction:** Includes polymer taillight housing, stainless steel mounting studs, nuts, and washers, custom designed acrylic lens to maximize the LEDs visibility, original style red reflector in bezel for lights off safety, pressure cast and chrome plated bezel, custom molded rubber taillamp to body seal. Completely assembled in our Indiana factory.

**LEDs:** 14 high intensity LEDs per lamp with 100 degree viewing angle and rugged four pin design.

**Kit Contents:** (2) LED complete taillamp assemblies, (4) solderless connectors, (2) LED to car electrical harness, (2) custom molded taillamp to body seal, installation instructions.

## LED Complete Taillamps

Who makes parts for P15 Plymouths? No one? Wrong! Technostalgia makes a complete LED taillight for the “engineering leader of the low cost three.” Our complete taillight includes items Plymouth never did. These include a molded rubber taillight to body seal and a taillight bucket. Our lights bolt right into the holes on your car. Your car will be safer and more visible due to our LED technology and **RapidFire** brake lights. Every time the brakes are pressed, our stop light flashes three times rapidly followed by a solid, extra bright LED light. All of this is controlled by an onboard microcomputer. And the price? Less than the cost of re-chroming ONE of your bezels.
