Director European Membership
Open - TBD
Greetings to all,

First I would like to extend a warm welcome to all of the new members of the W.P.C. Club and to all of you who have renewed their memberships. In future issues there will be a space dedicated to this purpose, we have been neglectful and apologize. Board member, Kevin McCabe has volunteered for this new activity.

I also want to thank Diran and Joyce Yazajian for storing and mailing past issues. On this topic, Thanks to Sandy and Woody Hummer for storing the many hundreds of past issues.

we receive many emails relating to the expiration dates of memberships. Please look at the mailing label attached to the mailing envelope, it lists the expiration date and the membership number.

To all members who have availed themselves to a free ad in the swap meet section, this is for you. Members are limited to ONE ad of 50 words, not including your name, address, email address, phone number and WPC membership number. If you are one of the few who are abusing this policy, please contact our Editor, Frank Pascoe to remove your choice of excess ads.

Plans for the 2021 National Meet in Auburn Hills Michigan are proceeding as planned and, we expect to see you there.

Finally, I hope that at some time during this past summer you had an opportunity to enjoy a leisurely ride in one of your proud possessions. Mary and I took advantage of a very warm and pleasant afternoon and drove to Marine City Michigan for an early dinner on the St. Clair River. It is always good to be among people. While dining, we looked across the river to Sambra Ontario and wondered if and when all of this will end.

Stay safe and above all stay healthy.

Pat
Summer cruising is just about wrapped up, as daylight is shorter, nights are cooler and the trees are painting the landscape in their brilliant autumn color pallet. This means that we automobile enthusiasts are settling our cars down for their winter nap. This past summer was certainly a departure from the norm, as the COVID slowed down many of our cherished outdoor activities. I was still able to get my rides out on the road and leave some pavement behind. There were still a lot of smiles per miles, that is what our car collecting passion is all about. My hope, along with everyone else, is that we are lifted from the pandemic and get back life as it was before.

WPC NEWS will feature another installment of How Many Did They Make…. This issue focuses on the 1955 Dodge, Chrysler Corporation’s chapter called the Forward look.

The WPC Club wishes to acknowledge and pass on our gratitude to John and Barbara Weiser for their generous donation to our club’s treasury. It is appreciated, especially during these times. Thank you, John and Barb.

WPC NEWS is your magazine. As such, we welcome you to submit a story about your cars, your experiences, travels, shows etc. about the hobby. If you have some advice or know how about keeping our classics on the road, please send it to us. Everyone in the club can benefit by the knowledge and passion of others who share the same interests. If you would like to see your ride showcased, Send us some photos and a description, 50 words or less, and we will post it in the Reader’s Rides section.

If your WPC region has activities that you have planned, please post them in the Calendar of Events. It is fun to see what other groups have going on, and there are those who may wish to participate.

In this issue, we are highlighting recent activities from a couple of our regional groups who managed to get together in spite of the summer slowdown.

Some house keeping issues:

As the editor of WPC NEWS, I receive many requests for ads to put in our Swap meet section of the magazine. Please be aware that you need to submit your WPC membership number, as our ad section is open to WPC members only. The ID number is proof of that. Your ad will not be published without it. A lot of time is spent tracking it down, so your help in providing it will be greatly appreciated.

If you do not know what it is, please go to the WPC website at: chryslerclub.org. The membership roster with your ID # can be accessed there. You can also contact Terry Williams, our WPC Club Membership Chair at: twilliams@midwestmopars.com.

WPC NEWS has introduced a “caveat”, regarding the Tech Bits column, so as to remove WPC Club, Inc from any responsibility regarding information or advice from a contributor about matters of safety re modifying or repairing a system on a vehicle.

Until next issue, Happy Mopar Motoring,

Frank T Pascoe
Frank Pascoe, Editor WPCNEWS
As a result of the Covid 19 pandemic, as you know, the 2020 WPC National Club meet was cancelled this past July in Pontiac Michigan. It will be held next summer 2021 in the same location, same hotel, the Auburn Hills Marriott, in Pontiac, Michigan. Details of dates, costs and schedule of activities will follow in future WPC NEWS editions as they become available.

EDITOR’S NOTE:
There have been no reportings of events coming up from any of our Club regions for this issue.

WHEN YOUR REGION HAS AN EVENT, PLEASE SEND IT TO WPC NEW FOR INCLUSION. Everyone will have a chance to see what is going on in your area and may be inspired to attend.

WPC 50th Anniversary Meet commemorative t-shirts available. Cost is $20.00 per shirt (includes shipping and handling). Available in white only, sizes L, XL and 2XL. Contact Peggy Kelly at (586) 925-2643 to order. Checks or money orders only payable to WPC-GLR. Call before sending money.
Like everyone else in the land, summer car cruise activities were drastically curtailed, but the folks from these WPC NW regions did manage to get their classics out on the highway.

**PACIFIC WONDERLAND REGION**

**TOUR TO HAGG LAKE – July 9**, led by Jeff & Jeannie Gretz Dave Entier, our Activities Director arranged this tour, our 1st of the year! On Thursday morning we all assembled in Beaverton for the start of a scenic tour to Hagg Lake, part of the Eagle Point Recreation Area near Forest Grove. The Gretzes mapped us through a beautiful route of back roads of almost 50 miles, never touching a freeway. Those on the tour included the Duthies, 1964 Imperial convertible, Dave Entier, 1963 Imperial convertible, Jeff and Jeannie Gretz, 1955 Imperial Newport, Dick Romm & Norm Purdy, 1952 Plymouth Suburban. In addition, friends of Dave Duthie joined us in their modern car. The weather started partly cloudy with sun peaking through and turning sunny. We drove on the mostly narrow roads winding through rolling hills, with much farmland and a fair amount of winery entrances. The largest town we passed through was Newburg. Arriving at Hagg Lake, we found a nice grassy area where we could spread out our chairs at ‘proper’ social distancing, yet close enough for easy conversation. Each family brought their own lunch. We spent a very nice afternoon talking and walking by the lake enjoying the warm weather. The fact that it was not on a weekend resulted in fewer crowds which would probably normally be at this recreational area. We saw boating, swimming, etc. yet in relatively small numbers. This tour engendered enthusiasm for more of the same as the summer progresses.
October is here!! Looks like Vancouver Island is still one of the safest places in BC to be during this Covid pandemic. There are currently 5 cases being treated on the entire island as I write this. The total cases since the whole thing started has been around 80 at this point. Not bad for a population of around 870,000 for the entire island. About 400,000 of the population makes up Victoria and the surrounding areas. Having said all that we still need to be careful so keep safe.

We finally got our September Tour to the Merridale Cidery in Cobble Hill on Sept 20th after postponing it for a week because of the intense smoke in the skies from the western wildfires in WA, OR and CA. Sunday Sept 20th dawned as the first clear sunny day since Sept 11th when things started to go downhill with smoke. We hope that all our fellow members in WA and OR and doing well and that none have been devastated by fires or Covid. What a year it’s been. Anyhow, there are some photos in the newsletter further in. All in all it was a good time together - but of course we had to follow the provincial health guidelines for restaurant seating. We were placed at three tables in the rear covered patio area. Those who attended were Shannon & I, Ron, Jean & niece Bev, Rudy & Miep, Glenn Clarke, Chris & Jorja, Gerry McDonald, plus Stoney and Julie Stonehouse. Food was good and the day was warm and sunny.
I had this hood ornament given to me a few weeks ago and if anyone is interested it’s free for the taking. It is apparently for a 1949 Chrysler Imperial. Contact me if interested ian.smale@chryslerclub.org or phone 250-652-6756 I would like it gone soon. Shipping would not be included.
World War II was coming to an end. America was a major force in bringing it to that end. She demonstrated her manufacturing might as her assembly lines churned out the means to victory. At war's end, war time production halted and with the GI's returning home, they desired to get back into the swing of things. They wanted cars, homes and all the goods that they did with out on the front lines. Chrysler had to switch from building tanks, back to building Dodges. However, car design was mired down in a pre-war look as time was spent ramping up production quickly. Emphasis on aesthetics took a back seat. This was certainly Chrysler's design philosophy; that utility was more important than looks. It proved to be a fail, once cars were widely available. America was moving forward in the 1950's. To paraphrase Sonny and Cher, “Cars are a-goin' faster all the time, Speed was the new born king, uh huh”. Jet engines and rockets made the far reaches of the world a lot closer. Nearly driven out of business in 1953 and 1954, Chrysler's market share fell down to only 14% in 1954. Her cars were stodgy, dowdy, short and plump and lacked the pizazz of this new born "Jet Age" rocket look.

The company lured the extravagant Virgil Exner away from Studebaker to restyle the entire lineup of vehicles, and bring it up to speed. The first full result of this was the 1955 product line. Tex Colbert, Chrysler president, funded the changeover with a long-term loan from Prudential for $250 million, which brought in money for manufacturing and plant upgrades. Hence, the advertised name – the “Hundred Million Dollar Look.” Also, and more popular; the “The Forward look”, became the popular slogan of the times because of its connection to movement and speed. This is exactly where Exner and his crew were trying to point the styling direction of the company: to align with the Jet Age that American society was so in love with. Sales shot up immediately, and the company easily recouped its investments. Market share increased to over 17% for 1955.
Not all of the cars were direct Exner designs; Maury Baldwin was in charge of the 1955 Dodge. Still, he seemed to be influenced by Exner’s lead, using spear-shaped side trim and split grilles. The body shape was common, because Chrysler shared more between brands than GM. Baldwin’s 1955 Dodge was 212 inches long, on a 120 inch wheelbase; it grew by nearly seven inches over the prior year. Buyers got a modern wraparound windshield; the grille had traces of Studebaker in it, also suggesting Exner’s influence.

At the time, Dodge was a fairly high brow brand; Plymouth was responsible for meeting Chrysler’s mass-market needs, and Dodge, DeSoto, and Chrysler in that order, picked up a smaller number of more lucrative sales.

**Dodge Model Line Up for 1955**

The line up consisted of two and four door sedans, two door hardtops, two and four door wagons, and a two door convertible; the Dodges were all basically the same, with names assigned to trim levels. These were the Coronet, Royal, and Custom Royal; only the Coronet, being the base model along with the wagon named Suburban, had a standard six cylinder engine, with an optional polysphere V8. The other cars had standard V8s. Later in the model year, the specialty Lancer and La Femme added to the variety; from then on, the hardtops and convertibles were named Lancer.

The Coronet wagon was not marked as a Coronet; instead, it had the word Suburban on the rear fender. In the opposite fashion, while the two-door hardtops were technically Coronet Lancers, they only had Coronet on the fenders. The next step up was the Royal; again, the Royal wagon had a different nameplate, “Sierra,” on the rear fender. The hardtops could have either Royal or Royal Lancer badges. Turn signals were standard on the Royal and Custom Royal models but optional on the base Coronet. The top of the line Custom Royal was only sold as a two-door hardtop, four door sedan, or two door convertible.
All hardtop coupe and Custom Royal-only convertible models were called “Custom Royal Lancer”. The Custom line featured unique chrome tailfins (although early model year cars went without this trim), special tail light surrounds, and an upscale interior. Backup lights were standard on the Custom line but optional on all others. The Custom Royal also featured the hemi 270 CID Super Red Ram engine.

**POWERTRAIN LINE UP FOR 1955**

Dodge used three engines in the 1955 cars: the flat-head “Getaway Six”, Red Ram V8, and Super Red Ram V8. The old flat-head was a fairly old design, and provided fairly slow acceleration, but was relatively economical.

The Red Ram V8 was based on the first-generation Hemi V8s; the company had to reduce costs and increase production, and swapped in a more practical polyspherical head design. These used a single rocker arm per cylinder, rather than two in the Hemi, and had low-friction valve locks so the valves could rotate, reducing wear. It was optional in the Coronet and standard in the Royal, in 270 cubic inch form.

The Super Red Ram V8 was also 270 cubic inches, like the Red Ram, but it had the hemispherical combustion chambers with dual rockers (one for exhaust, one for intake) per cylinder; it was called the “double rocker.” This was optional on lesser Dodges, and standard on the Custom Royal. Very few buyers got the Super Red Ram power package — a four barrel carburetor and dual exhaust, mainly; the Carter four-barrel carburetor had metering rods on the primary jets, with velocity valves for the secondaries.

Super Red Ram V8

Still relatively new to Dodge was a fully automatic transmission — the two speed PowerFlite, controlled from a lever on the dashboard (a single-year device). Traditionalists could get the three-speed manual, a very simple setup, or the three-speed with a 0.7:1 overdrive for easier highway driving. Dodge still used a tailshaft parking brake.
DODGE INTERIORS AND TRIM FOR 1955

In a year when other manufacturers tended to be quite flashy, Dodge tried to keep up; they had 45 different color schemes, with basic, two-tone, and triple-tone combinations, using 13 basic colors, never clashing. The triple-tone cars allowed buyers to switch the upper and insert colors, to the point where there were 76 possible combinations. Contrast that to today’s auto interior offerings where you generally have only black, grey and tan colors offered to the consumer.

Inside, there were fewer choices (still more than modern cars): black, blue, green, and yellow, with Jacquard fabrics matched to a tough, color-matched vinyl material on the seat backs. The interiors were all two-tone, and the Custom Royal split the colors with chrome; Custom Royals also had painted rear window weatherstripping, to match the headliner. To help buyers, late in the year, Dodge added a plate with the paint and trim codes.

The instrument panel was faced with black gauges, with an ammeter, fuel gauge, antifreeze temperature, oil pressure gauge, speedometer, and odometer; the ash-tray/headlight switch is designed to also look like a gauge. Fresh air doors under the dashboard diverted air into the heater when closed, and into the cabin when open; these were meant to be seasonal items.

Dodge used quite a bit of stainless steel trim on the car, with numerous trim parts being die-cast in addition.
Popular accessories included power steering and brakes. Buyers could also get a four-way power seat (up, down, forward, backward), spinner or normal wheel covers, a foot-pumped windshield washer, wire wheels, air conditioning, rear seat radio speaker, among a myriad of other options.

**SUSPENSION COMPONENTS**

With torsion bars still in the future, 1955 Dodge cars (along with Chrysler, DeSoto, Imperial, and Plymouth) used coil springs up front and leaf springs in back. The coil springs were attached with kingpins, which can only travel in one plane; that kept the front wheels’ axis of inclination the same at all times, an odd feel today (they would be replaced on the 1957s). V8 cars had an idler arm parallel to the steering gear arm. Steering was easy, regardless.
CANADIAN DODGE MODELS FOR 1955

Chrysler did well in Canada, with a 17% market share — up from 11% the year before. That put them #8, as a brand. The lineup in Canada was Crusader, Regent, Mayfair, and Custom Royal — and only one, the Custom Royal, was an actual Dodge; the others were Plymouths, with Dodge fronts, on a 115 inch wheelbase. Regents and Crusaders had a little 228 cubic inch six cylinder, with a 250 optional; Mayfairs had a 241 cubic inch V8; and Custom Royal had the American engine.

To sum it up, This new Forward Look brought Chrysler from the post war doldrums, to the forefront of automobile styling and design. Like the rockets and jets that the new direction emulated, it only took off from there. The Exner philosophy dominated the way cars would be presented, growing longer and sleeker, tail fins and all. Engines became more powerful, Engineering developed new systems to make cars easier and safer to operate. All of this propelled Chrysler Corporation through the rest of the 50’s decade and into the early 60’s.

This Scamp GT was special ordered new by the original owner. It was delivered on July 27, 1983. I purchased it from him in September of 2015. It had been stored in his garage since 2000. It is 1 of 114 built in this color with the options ordered. Totally original exterior and interior. Mechanically, it has been almost totally rebuilt. It received a 2nd place award for it's class at the Grand National Plymouhs Owners Meet held in 2018 in Northville, MI. It is pretty rust free as most of these models were rust buckets. All things considered; my Scamp GT is a pretty rare pick up.
In 1973, I went to the Chrysler dealer looking for a street Hemi. But 1972 was last year for the Hemi. So, I ordered this 1973 Dodge Charger, bright red, 400 cu in, 4 speed manual trans. It had AC, PW, AM/FM stereo radio, Tuff wheel, and many other options. The vinyl roof and white interior seats, except (driver seat) are original. All parts replaced are OEM or close to original as possible. I entered this car in the first WPC Winter photo meet in 1984. Got an honorable mention. Car is now 47 years old and I am thankful that I still own it.
Chrysler Corp. introduced the alternator in the 1960 model year on specific US built models. It was a standard item on the new US built Valiant models and also came on the 1960 Chrysler 300-F fitted with the optional 400 HP Ram Induction engine and Pont-a-Mousson four speed manual transmission. One of these special 300-F models won the Daytona Flying Mile in 1960 and sold several years ago for well over $200,000.00 US, still in like new condition with only 11,000 miles. The standard equipped 300-F still came with a generator.

Due to increased electrical loads of more and more accessories being added to vehicles at the time, the generator was no longer able to keep up with the demands, especially when adding power consuming accessories like Air Conditioning, power windows, locks, antenna, and seats etc. However the history of the alternator goes back further than 1960. Dodge started selling Leece-Neville alternators as options in their taxi and police cars in 1950, and later had them as an option in the Power Wagon. Alternators had also been used in Military vehicles in WW-2. By 1957 (possibly earlier), Ford also had optional alternators in police cars and ambulances. The first standard equipment alternators used on Chrysler products were made by a company called Essex Wire Corp. The Essex brand Chrysler alternator can be identified by the wide spacing of the fins on the front and rear frames and will also have the Essex symbol cast into both of the frames. For the 1963 model year Essex continued to make the alternators for Chrysler, however they added more fins to the frames to give it added strength. Essex also produced the first mechanical voltage regulators for Chrysler and had the Essex symbol stamped into the metal case of the voltage regulator too. Alternators have several advantages over generators - they charge at idle, where generators do not, reducing battery load and allowing for more electrical accessories, they have a longer lifespan than generators, and can create far more electrical power than generators in automotive use.

Starting in 1961, all US built Chrysler Products came with an alternator as standard equipment, but they didn't become standard in the Canadian built Mopars until 1963. The interesting thing that Chris Gannon's Canadian built 1961 Chrysler Saratoga 4 door
hardtop has an alternator. For several years we had been wondering if the former owner, George LaBash had installed it, as he was a mechanic, but the mount was a factory cast mount used in 1961 models and the right side exhaust manifold was not the type that had the generator mount cast into it. The whole thing looked to have been on the car since day-1. I have also seen photos of 2 other 1961 Canadian built Chryslers which also seemed to have factory installed alternators. So I finally asked the question to our member Bill Watson, an automotive historian who lives in Vancouver. He sent me some information a couple of weeks back, confirming that Chrysler Canada did offer alternators as optional equipment in 1961 and 1962 before making them standard in 1963.

In 1961-1962 Chrysler Canada purchased generators from Auto-Lite’s Sarnia, Ontario factory, while selling optional Leece-Neville alternators of 60 to 100 amps. The following picture is an excerpt from the 1961 Ross Roy Data book sent to me from Bill Watson. Notice in the fine print on the bottom - it notes “Optional for Canada”. There is slight an anomaly in this - in that if you were to purchase a brand new 1961 New Yorker or a new 1961 Imperial in Canada, they would have come with an alternator as standard equipment as both the New Yorker and the Imperial were imported from Detroit by Chrysler Canada. Also any 1961 convertibles sold in Canada would have had an alternator as they were also imported from Detroit. Lesser models such as Windsor and Saratoga Sedans and Hardtops built in Canada in 1961-1962 still came with a generator as standard equipment.

NEW ALTERNATOR FOR ALL CHRYSLERS AND IMPERIALS

The battery is kept charged by a heavy-duty alternator. It provides charging current even with the engine at low-speed idle and a full quota of accessories in operation. No current regulator is needed. All moving parts are permanently lubricated. Simple in design, it will outlast a generator, do a better job of keeping battery fully charged.

The Canadian Automotive Trade Magazine on the new 1961 models for Chrysler Canada also mentions the alternator available as an option on Canadian built models.

Having said all this, my own car, a 1960 Chrysler Saratoga has been riding along all these years with a generator. This car has a full load of optional equipment, with power windows, power seat Mirror-Matic and an after-market (old Mark-IV) working Air conditioner. I’ve never really been happy with the voltage being put out while the car is idling. When running at speed, it would put out 14.4 Volts, but at best with no accessories running, it would idle at around 12.8 Volts. With headlights and heater running, or A/C running, the voltage would drop to about 12.4 Volts at idle. And if idling for a long while stuck in traffic then that definitely became an issue. A couple of times I was stuck in the Blaine border crossing for the good part of an hour while the car was idling. It took quite a while to get back to over 14 Volts charging after we got through the lineup. Not only that, but it seems that the generator itself overheated because the amp gauge was still showing on the low negative side for about 10 minutes after we resumed normal driving speeds and it eventually got over to the charge side. I finally got one of those small voltmeters that simply plug into the lighter socket to actually show me what the voltage output is all the time. (The Amp gauge only shows whether it’s charging or not). The plug-in voltmeters are relatively cheap and can be bought on line. I had been thinking of installing an alternator on the car for several years, and last summer in 2019 I purchased a “Powergen” from a supplier in California. This is an alternator that is built into a generator style case so that it looks original. The guy on the phone assured me that it was specifically for Mopar and that it would fit in my generator mount on the exhaust manifold. Once I unpacked it and took a close look, I found that it would not fit on the car’s original mounts. For one thing, it was too short to fit in the original generator manifold mount, and the tension adjustment arm comign up from the water pump would not reach the top mounting hole on the unit. I then found out from a local auto electric shop that it was a 100 amp unit and that it would burn out my amp gauge if I was able to use it and hook it up.
I called the supplier and explained the situation, and he tried to tell me that that the mounts in my car must have been changed because he had “sold hundreds of these to Mopar owners” for late 1950s Chrysler products with B series engines. I told him mine still had factory original brackets and sent him photos of the mount and photos of other 1960 Chryslers with the same mounting style to prove the point. He was still skeptical and would not pay return shipping. That was an expensive lesson but at least I got the cost of the unit refunded.

Finally this year I decided to install a standard Chrysler alternator, to heck with it looking original. Plus, as a US built 1960 Chrysler, it’s only one year away from having a factory installed alternator anyhow. Chris Gannon gave me an old alternator found stored in his garage. I bought a generator-to-alternator universal mounting bracket from Brian Roberts Auto Electric here in town, (which bolts to the original exhaust manifold mount) and did a mockup to make sure it would fit. And it did. I then took the alternator in to Brian Roberts and had them rebuild it. They did a fantastic job, which included re-finishing it so it looks brand new. It’s a model 7007 60 Amp unit used from 1961 through 1969, so there is no chance of burning out my amp gauge. They mounted an external regulator right on the alternator which makes it a one wire unit and very easy to wire in. The main wire coming from the alternator is now hooked up to the “BAT” terminal on the original regulator, instead of the “ARM” terminal, which makes it so that the amp gauge still functions. The original regulator is just there basically for a stock look and doesn’t function as a regulator any more. The photo below left shows the regulator mounted on it. I am very pleased with the results and the voltage is now always over 14 V. At speed it shows 14.4 to 14.5 V and with no load at idle sits at 14.3 to 14.4 V, and at idle with a load, it drops down to 14.1 – 14.2 V.

**Voltage now ranges from 14.5 at speed to 14.1 at Idle with A/C on**

These type of vacuum operated switches were used from around 1959 through 1964. Eventually the buttons to control the heater and defroster functions get harder and harder to push. Sometimes a little lubricant sprayed into the unit will help, but eventually it will probably quit working. The push buttons are controlled by thin sliding cams inside the control. After many years the cams wear out from continuous use of pushing the switches in, and dried up lubricant exacerbates the problem. The control buttons in my 1960 Chrysler Saratoga were getting difficult to push in, so I squirted a little TriFlow, a Teflon based lubricant into the unit and it made a big difference although the buttons were still a little rough going in. I knew I had a spare control in the basement, so I pulled it out and tested it and the buttons were very stiff, even worse than the unit in the car, and this one had been in dry storage since 1988. So I pulled it apart and found that one of the cam sliders was badly worn and cracked. I just happened to have a fairly large sheet of thin white plastic sitting in the workshop, so I traced the original slider and cut out a new one using scissors, an exacto-knife, and trimmed it with a fine file. I then cleaned all the brass contacts in the push buttons, and cleaned the whole unit up with rubbing alcohol. I then coated the sliders with a small amount of TriFlow and reassembled the unit. It works perfectly with no resistance when pushing in the buttons. You can see in one of the photos where the one slider cam is damaged and cracked, where I have circled the damaged areas, and the straight line is where the piece is cracked through. The original upper and lower sliders were made out of a material called Textolite, while the darker colored centre slider is made of a fibre-board type of material. The new piece is made of a piece of thin white plastic I picked up at Industrial Plastics on Cloverdale Avenue a while back for another project. It just happened to be the same thickness as the original slider cams.

The unit was taken apart by drilling out the top of the plastic rivets through the mounting holes on the back side cover. To re-assemble it, I purchased some very small screws to re-attach the cover plate.
CARS FOR SALE

1954 Chrysler New Yorker Deluxe 4 door sedan; 331 hemi, PS, PB, AT; Paint, chrome and interior all original and as close to “as new condition” as you will find. A 2 owner car with a total of 47,450 miles. Stored in dry garage with cover, with periodic engine runs. Includes original floor mats, bulls eye headlights, spare tire, tool kit and original owner’s manual. Asking $14,500. Additional photos or information available, call Steve at 425-387-5026 or send email to nwsgilmore@gmail.com

1937 Chrysler Imperial Touring sedan (C-15), 2014 winner of the AACA Thomas McKean National Touring award. (over 100,00 cars and only ONE car per year received this award). One of 721 built, 140” wheelbase, straight 8, 3 speed with overdrive. NO rust. Have owned since 2007. 65,500 miles. $29,000. Dana meadows WPC# 17615 757-718-0483. Email: danam500@verizon.net

1985 Plymouth Reliant SE 4 Dr. 70100 miles. .Second owner enjoyed it for 43 years garage stored, excellent condition. $85,000. Albert Vannice, WPC# 11441, 814-466-6115, bav1140@comcast.net for photos.

1939 Chrysler 4 door C-22 6 cyl, partially disassembled, many new parts, unable to complete, needs good home. $6,900/ OBO. David Trenholm. WPC# 10146, Newport News, VA 757-287-9074. please email for pictures and parts list. djtrenholm@yahoo.com

Rare 1983 Plymouth Scamp GT front- wheel drive Pickup. One of 114 built in Charcoal Gray with a 5 speed transmission. Vehicle is rest free and stripes are in excellent condition. Vehicle interior & exterior are unrestored & original. Mechanically it has been completely rebuilt. Asking $8,000 OBO. Donald W. Raffensperger, WPC#17641, 123 Elm Street, Elizabethville, PA 17023 (717)439-0607

For sale 55 Dodge hdtp 318 engine auto trans good body with some rust on sills. Kept under cover for past 30+ years. Bought as potential parts car but was not needed but used for pattern no dents good glass and chrome pictures available. $2500 Located in WY, Don Thorsen, WPC# 14193 307 746 2887
